FloorWars phone test: what to do

Thanks for helping. FloorWars is an Android app that counts stair steps. We need real recordings from real phones to check that it works. The test takes about 15 minutes. You only need the APK file, your phone and a staircase.

1. Install the app

1. Open the APK file you were sent (**app-release.apk**) on your Android phone.
2. If Android asks, allow installs from the app you opened it from (Drive, chat app, files).
3. If Play Protect warns, tap **Install anyway**. The app is an unpublished test build, so the warning is normal.
4. Open **FloorWars**. You do not need a laptop or internet connection to run it.
5. Go to Settings > Apps > FloorWars > Battery and set it to **Unrestricted**. Without this, Android may stop the recording when the screen is off. The exact menu names vary by phone.

2. Make one recording

1. On the first screen tap **Skip sign-in (dev)**, then **Sensor logger** on Home.
2. Pick a **label** (what you are about to do) and a **placement** (where the phone is).
3. Tap **Start** and grant the permissions it asks for. A notification "Logging sensors" appears and a timer runs.
4. Do the activity for about 30 seconds. Keep the placement the same for the whole recording.
5. Tap **Stop and save**. You should see "Saved".
6. Tap **Share CSV** and send the file to the person who sent you the app.

3. Which recordings we need

Do each label at least once, ideally with different placements. Stairs in two different buildings help most.

Label	What to do
stairs_up	Climb real stairs at a normal pace. Try phone in pocket, in hand and in a bag.
stairs_down	Walk down real stairs, same placements.
elevator_up	Ride an elevator up while standing still. The app should score nothing for this.
walk_flat	Walk on level ground.
shake	Shake the phone in your hand.
blow	Blow gently on the phone near its top edge (tests the pressure sensor).

4. One extra check (screen lock)

Do one recording where you lock the screen for 60 seconds in the middle, then unlock, and stop as normal. Tell us if the recording kept going. Nothing else to do.

5. Tell us about your phone

Send these along with the files:

- Phone make and model (Settings > About phone).

- Android version.
- Anything odd: error messages, the notification not appearing, the app closing, Share CSV not opening.

Good to know

- A recording is a CSV file of sensor readings. It has no name and no location. Please do not edit it.
- By sending the files you agree to us using them to test the app.
- If something fails, do not worry. Failures are useful data. Just tell us what happened.
