Testing FloorWars: what we need from you

About 15 minutes, at one of the two faculty buildings. Thank you for helping.

FloorWars is a campus game we are building: faculties claim university buildings by taking the stairs. This test covers only the first part, signing in and checking in at a building. Climbing and points come in a later version, so you will not see them yet.

Before you start

- An **Android phone**, version 7.0 or newer. iPhones are not supported yet.
- Your **university e-mail**, ending in **@student.upt.ro**. Other addresses do not get a sign-in code.
- You are **18 or older**.
- The **test time** Cristea gives you. Our server only runs during it.
- For step 3, be at the entrance of **Facultatea de Automatica si Calculatoare** or **Facultatea de Mecanica**.

1 Install the app

- Cristea sends you a file called **app-release.apk**. Open it on your phone.
- Android asks whether the app you opened it with (Files, Chrome, WhatsApp and so on) may install apps. Allow it for this install.
- Android may warn that the app is not from the Play Store or comes from an unknown developer. That is expected for a test version: choose to install anyway.
- The app appears on your phone as **FloorWars**.

2 Sign in and pick your team

1. Open FloorWars and type your @student.upt.ro address. Do not add a **+** part to it.
2. Turn on both switches: **I am 18 or older** and **I accept the terms and privacy notice**.
3. Tap **Send code** and wait for an e-mail with a 6-digit code. Check spam if you do not see it.
4. Type the code and tap **Verify**.
5. Pick your faculty team and tap **Join team**. You cannot change team later this season.
6. Close the app completely and open it again. You should still be signed in.

Do not tap **Skip sign-in (dev)**. It is for our own sensor tests and opens the app without your account.

3 Check in at the building

At the entrance there is a printed FloorWars code.

1. Tap **Check in**, then **Scan entrance code**.
2. The first time Android asks for the camera, tap **Don't allow**. The app should say camera access is off and offer **Open Settings**. Tap **Scan again** and this time allow the camera.
3. Point the camera at the printed code. You should see:

   > **Checked in: Facultatea de ..., 90 min left**

4. Tap **Done**, then **Check in** again and try **Use my location**. Allow location and choose **Precise**. At the building you should see the same "Checked in" message.

If you have five more minutes: walk about 100 m away from both buildings and try **Use my location** again. The app should say you are not close enough to a building.

4 Tell us how it went

Send Cristea a short message with:

- Your phone model and Android version (Settings, About phone).
- For steps 1, 2 and 3: did it work, yes or no.
- A screenshot of any error message, and the time it appeared. We look up what happened by the time.
- Anything that was confusing or slow.

Never send your 6-digit sign-in code to anyone, including us.

What the app uses

- Your **e-mail**, to send the sign-in code and identify your account.
- Your **team** and your **check-ins**: which building and when.
- The **camera** only while the scanner is open. It reads the code; it saves and sends no photos.
- Your **location** once, when you tap Use my location, to find the building. The app does not track you in the background.

This is a test version and may have bugs. To have your test account deleted, tell Cristea.
